If you just think about it for a moment, you'll probably come up with quite a few names of alternative stores or repositories on Android apps that intend to be the biggest alternatives to Google Play as they do we download the same applications but in APK format as others that are not available in the official market. Here's another alternative, with a wide range of legal and pirated apps, because it also allows us to download patch and modification apps. An alternative Google Play ACMarket store is one of those stores that offers us patched content, whether games or apps. How it works is very simple, like many similar to other applications of the same style. Simply download the store APK and perform the installation. Once we get access to the main menu, we'll be able to search for apps, all of which are sorted by categories, to install them on our device. We are talking about a huge repository of patch applications that we can download and use for free ... including games of minecraft liking, for example. These are the main features of this store: clean and easy to use interface design. Download apps directly from the store. Catalog of modified and patched applications. Update your application database daily. Ability to customize your features. Download patched apps and mods for free. All content is divided into different categories such as apps, games, videos, music, tools... By accessing each of them we can find different applications, as well as be able to fly through recommended applications and new applications. If you've read a few opinions about ACMarket, you'll have realized that its users are really happy with this market. However, we should recommend that you always download legal applications that pay the price they are worth according to their developers, mainly for several reasons: developers do not live on the air and need to earn money for their work. If they don't make money, they'll stop developing and then we won't have all these apps that we like so much. On the other hand, we expect that you would not want to work for free, they also do not. Moreover, no one can guarantee the safety of these applications, since no one knows if they contain viruses or other malware mainly because they have not gone through the verification process. What's new in the latest version Developers haven't revealed the changes for this alternative store. Shop.
